

Gram Panchayat Grievance Tracker

A simple, open, and clear civic complaint register for village communities.

PURPOSE

Village Public Service Tracking

KEY FEATURE

Click Any Card for Full Case Details

STATUS

Live & Working System

1. Problem & Affected People

Solving communication gaps and long waiting times in village administration.

Slide 2 of 7

⚠️ The Main Issue

Villagers file complaints about broken drains, dark streetlights, or dirty drinking water, but wait for weeks without any updates or explanations for why repairs are delayed.

👤 Villagers & Families

- **No Updates:** Don't know if anyone is working on their complaint.
- **Health & Safety:** Deal with dirty water or dark roads every day.
- **No Voice:** Can't see who is responsible or when work will finish.

👷 Repair Crew & Technicians

- **Missing Equipment:** Hard to explain when special machinery or pumps are missing.
- **Permit Delays:** Waiting for official permissions from highway or electric departments.
- **Unclear Priorities:** No clear daily list of urgent jobs.

🏛️ Village Leaders & Officers

- **Hard to Monitor:** Can't easily see which ward needs urgent help.
- **Delayed Actions:** Find out about overdue problems late.
- **No Clear Records:** Missing past notes on what work was completed.

2. Solution Overview

Simple, clear, and open tracking for every villager.

Slide 3 of 7

OUR SOLUTION IN ONE SIMPLE SENTENCE

"An easy-to-use digital system for rural communities that lets villagers lodge civic complaints, track repair progress step-by-step, and see clear explanations whenever work is delayed."

Click Any Card for Details

Clicking any complaint card opens a full page with complete details about the citizen, officer, and complaint status.

Clear Reason for Delays

Shows the exact reason why work is delayed (such as waiting for digging permits or heavy suction pumps).

5-Step Progress Bar

Shows step-by-step progress from Filing → Inspection → Material Arrival → Work Done → Final Sign-Off.

3. Screenshots of Working Solution

Real views of our main complaint register and detailed full-page view.

Slide 4 of 7

4. How Numbers Are Calculated

Plain English explanation of how days, repair speeds, and alert targets work.

Slide 5 of 7

1. Days Waiting (Pending Time)

Days Waiting = Today's Date minus Date Filed

Counts how many days a complaint has been waiting since it was lodged.

Example: Filed July 1, Today is July 10 → 9 Days Waiting.

2. Total Repair Time (Resolved Cases)

Repair Days = Date Fixed minus Date Filed

Measures the exact number of days taken to finish the repair.

Example: Filed July 1, Fixed July 5 → 4 Days to Repair.

3. Average Repair Speed

Average = Total Repair Days divided by Fixed Complaints

Shows how fast the Panchayat team fixes complaints overall.

Example: 40 total repair days across 10 fixed complaints → 4 Days Average.

4. Target Deadline & Overdue Red Alerts

Urgent Cases: 3-Day Target | Standard Cases: 7-Day Target

If a complaint passes its target deadline without being fixed, the system automatically marks it with a bright Red Alert flag.

5. What Works & What Is Unfinished

Clear summary of features ready today and items to build next.

Slide 6 of 7

READY TODAY

What Works Fully

-  **Clickable Cards:** Click any card on the dashboard to open a full details page.
-  **Full-Page View:** Shows complainant name, ward, assigned officer, and target deadlines.
-  **Clear Delay Reasons:** Explains specific obstacles (like missing machinery or road permits).
-  **5-Step Progress Bar:** Visual steps showing progress from filing to final inspection.
-  **Officer History Log:** Full list of past notes and status changes with timestamps.
-  **Search & Filters:** Easily filter by ward, department, or search by citizen name.

UNFINISHED

Items Still to Add

-  **Automatic Mobile SMS Updates:** Sending text messages to citizens when their complaint status changes.
-  **Attach Photos from Phone:** Allowing villagers to take a photo of the damaged pipe or street light when filing.
-  **Local Language Switch:** One-click button to toggle text between English, Hindi, and local languages.

6. Next Improvement We Would Make

Adding a village map with smart travel routes for repair teams.

Slide 7 of 7

Interactive Village Map & Smart Repair Routes

The next best improvement is to show all complaints on an **interactive map of the village** and automatically create the best travel path for repair teams.

1. Map Pins

Mark open complaints as pins on a map so technicians can see exact locations.

2. Group Nearby Jobs

Group nearby issues together (like 4 broken streetlights on one road) into a single trip.

3. Save Time & Fuel

Creates the shortest route for repair trucks, fixing issues much faster and saving fuel.
